

AUTO TICKET CLASSIFICATION USING FLOW DESIGNER

Module 1 – Requirement Analysis & Planning

Project Title: Auto Ticket Classification using Flow Designer

Problem Statement

The school IT helpdesk receives multiple incident requests daily from students and teachers, such as Wi-Fi issues, projector failures, password problems, and slow computers. Currently, IT staff manually review each request and assign a category. This is time-consuming and inefficient.

Objective

- Automatically classify incidents at the time of creation.
- Reduce manual effort for IT agents.
- Improve ticket routing efficiency.
- Implement a no-code and easily maintainable solution.
- Automatically assign Category and Subcategory based on the issue description.
- Send an automated email notification to the caller upon ticket creation.
- Store ticket information in a structured and standardized format.

Project basis: uploaded ServiceNow project document.
