

AUTO TICKET CLASSIFICATION USING FLOW DESIGNER

Module 6 – Automatic Ticket Classification

Purpose

Use keyword-based conditions to automatically assign Category and Subcategory values.

Classification Rules

- If Short Description contains Wi-Fi or Network → Category = Network; Subcategory = Wi-Fi.
- If Short Description contains Projector → Category = Hardware; Subcategory = Projector.
- If Short Description contains Forgot Password → Category = Access; Subcategory = Forgot Password.
- If Short Description contains Slow Computer → Category = Performance; Subcategory = Slow Computer.
- Create the first condition using If and the remaining conditions using Else If.
- Use Update Record actions to set the Category and Subcategory fields.
- Save each condition/action and connect the branches in the Flow.

Project basis: uploaded ServiceNow project document.
