

AUTO TICKET CLASSIFICATION USING FLOW DESIGNER

Module 8 – Deployment, Validation & Conclusion

Purpose

Complete validation, finalize the update set, export the configuration, and document the completed solution.

Validation Checks

- Mandatory fields are captured correctly.
- Auto-number is generated without duplication.
- Category and Subcategory values are stored accurately.
- Reference fields resolve correctly to users and groups.
- Confirm that authorized users can access or modify ticket data.
- **Deployment:** Go to Local Update Sets and open Project Update Set.
- Change State from In progress to Complete and save.
- Use Related Links → Export to XML to download the update set.
- **Conclusion:** The project provides end-to-end automation for school IT ticket classification using ServiceNow Flow Designer. It reduces manual categorization effort, improves routing efficiency, maintains structured ticket data, and provides automated caller acknowledgement. The no-code design is maintainable and can later be extended with assignment automation, SLA tracking, or predictive intelligence.

Project basis: uploaded ServiceNow project document.
